

FloodSax® On The Flooding Frontline

When flooding strikes either inside or outside you have little time to act.

But now families and businesses can have instant protection with FloodSax® that are transformed from being as light as a pillowcase to as tough and heavy as sandbags within minutes.

Save Lives

When Hurricane Sandy struck the USA in October 2012 it sent an horrendous amount of debris heading for homes and people. Just look at how this wall of FloodSax® (right) held back a colossal amount of water and debris that would have devastated homes alongside the River Delaware close to New Jersey.

Save Money

The damage caused by any kind of flood can be astronomical, described by insurance companies as “the thief who takes everything in its wake” as insurance claims from floods are typically 30 times greater than from burglaries. That’s an awful lot of money, likely to send your insurance premium spiralling and it could mean you even struggle to get flood insurance again.

Save Space

The beauty of FloodSax® is that they come vacuumed-packed so can be popped in the smallest of spaces – in a car or on a fire appliance. A box of 20 FloodSax® which can be carried by one person and moved in a car is the equivalent to a pallet of 20 sandbags that would need a forklift to shift and at least a van to transport.

Save Mess

When flooding strikes it’s powerful enough to send water back up into homes from sewers, flooding bathrooms with filthy water. Just one FloodSax® popped down the toilet prevents this. Simply place them under a leaking pipe or appliance such as a boiler or washing machine and let the FloodSax® absorb all the water.

Save Property

FloodSax® have proven to be highly effective as they give instant protection from flooding, leaks and spills. Just 30 of them built as a wall protected £360,000 worth of equipment at this warehouse (left). FloodSax® can be used as highly effective barriers to stop water getting inside homes or businesses, but can also be used as barriers to divert water away from properties and into drains or water courses such as streams and becks.

Save Clean-up

Sandbags can deteriorate over time and eventually fall apart unlike FloodSax® which are clean, dry and easy to store. Sandbags can also be messy to clean up after the floodwater has subsided.

Save The Environment

FloodSax® don’t need to use the earth’s natural resources such as sand and after they’ve been used can be simply and easily disposed of swiftly in landfill sites where they will decompose over time.

FloodSax®

When disaster strikes make sure you’ve FloodSax® to hand

FloodSax® are manufactured by Yorkshire company Environmental Defence Systems Ltd
